04 · Backend, Data & Publishing Architecture

Blocked by

02 · Lovable Prototype & Constraint Discovery

Outcome

Moved the product into an owned development and deployment workflow centered on VS Code, GitHub, TanStack/Vite, and Vercel.

Verified milestone

On August 18, 2026, the production architecture was verified at commit `2ad0d34` – `Remove Lovable MCP and Cloudflare targeting, build for Vercel`.

Scope

- Local development in VS Code
- GitHub repository as source-controlled implementation

- Removal of Lovable MCP/platform runtime code
- Removal of Cloudflare/Wrangler targeting
- Explicit Vercel/Nitro deployment configuration
- Canonical live deployment on Vercel

Portfolio value

Demonstrates technical project migration, ownership transfer, environment strategy, source control, deployment architecture, and risk reduction.
